

SODASTREAM, BUBBLES SENT THROUGH EDI

SODASTREAM, water made exiting

SODASTREAM is the **home carbonation system** par excellence, a practical and functional tool to prepare sparkling water and fizzy drinks. Present in 45 countries worldwide, Sodastream distributes today in 3000 stores in Italy its sparkling water makers, sparkling drink mixes, bottles and accessories.

BRANCH

Home carbonation systems.

PROBLEM

Integration through EDI service with large retailers in Italy.

REQUEST

Some customers of the retail sector need to exchange orders and invoices electronically: the search for an **EDI provider** begins. The solution for electronic data interchange must **interface with the ERP** Navision, recently implemented, and the headquarters of the provider should be geographically close.

SOLUTION

With the **solution for electronic data interchange** D/cct Sodastream successfully exchanges data in electronic format with large retailers chains and e-commerce portals. In collaboration with EOS the exchange format between DERWID and their ERP system is defined. Then, according to the company's needs, DERWID creates the **customized import/export data format** to exchange orders, delivery notes, invoices, products master data and price lists.

BENEFITS

Thanks to D/cct, Sodastream **automated the order receipt process, reset the number of errors** and increased the transaction speed. The specific solution for electronic data interchange allows Sodastream to communicate using always the same format and to **rapidly integrate new customers**.
